

# MANAGE APP CONTENT SEAMLESSLY

Spend time building your brand—not unnecessary mobile infrastructure.

## FEATURE OVERVIEW

### Multi-Platform Content Management from a Single Tool

Create, manage and publish content across multiple platforms from one user-friendly web portal.

- Update content anywhere, anytime, without extensive training or dedicated staff
- Highly scalable AWS S3 content storage (private S3 bucket optional) and CloudFront CDN integration
- Easy-to-create custom data structures with support for Single Line Text, Multi Line Text, Single Line HTML, Multi Line HTML, Single Select, Multi Select, Date, Time, Boolean, File, Number, Integer, Decimal and Object ID
- Support for optional key value pair metadata for ultimate flexibility

Manage your app content with ease so you can spend time building your brand—not unnecessary infrastructure.

### Over-the-Air Content Updates

Deploy updates and new content through the cloud—no client updates or app store re-submissions required.

### Fast and Easy SDK-Based Integration

A few minutes and a few lines of code are all it takes to integrate content management capabilities into your app.

### Integrated Analytics

Phunware's analytics module is included to optimize app content and configurations.
