

PHUNWARE LOCATION SHARING

Connect users and enhance their on-site experience through in-app location sharing capabilities

FEATURE OVERVIEW

The location sharing feature of Phunware's Location-Based Services module allows users to share their location within a map view of your venue. This feature can increase social engagement among users, help employees find customers in need of assistance and much more.

HOW IT WORKS

For app users:

Users can share and view each other's locations in real time by creating user groups and enabling location sharing.

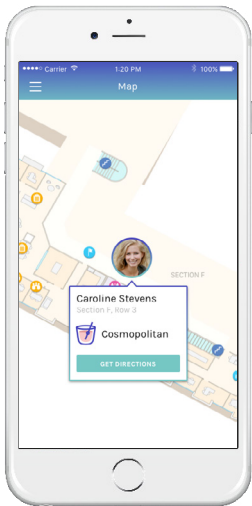

For developers:

Add Phunware's Location-Based Services module to your app to give users facility-wide indoor navigation and location sharing capabilities.

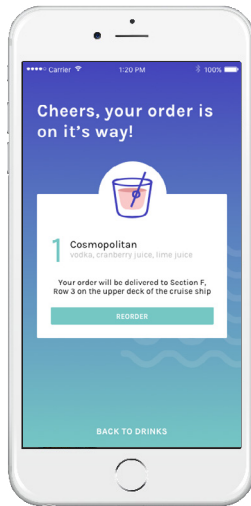

USE CASES

Regardless of your industry, location sharing can help drive outcomes that are important to your business.

Service

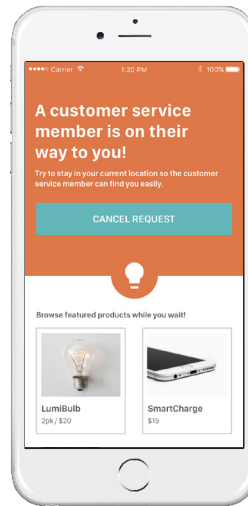

Receive customers' location and order details for an effortless service experience

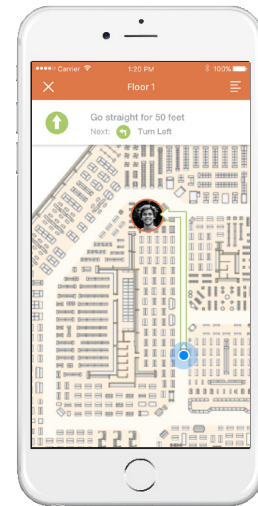

Send a confirmation to customers whose orders are being fulfilled

Retail

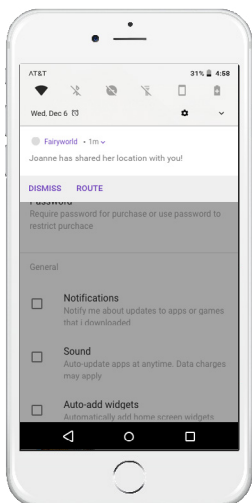

Enhance the shopper experience by making store associates easy to locate

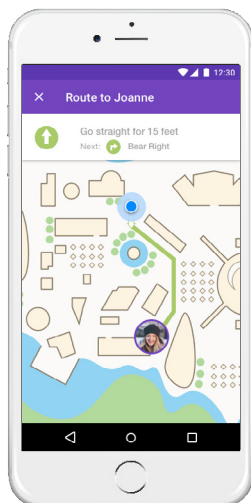

Help store associates navigate quickly to shoppers requesting assistance

Live Event Venues

Make friends and family easy to find with location sharing groups

Navigate directly to friends and family at the venue

HARDWARE SUPPORT FLEXIBILITY

Phunware's platform is hardware-agnostic, meaning our software works with multiple hardware providers and supports multiple location technologies, including Wi-Fi, physical and virtual Bluetooth beacons and more.
